

# smartserve™ 300

Allow students to independently borrow and return library items and browse the library catalogue

smartserve™ 300 is the latest solution in touch-screen kiosk technology that gives students freedom to manage their account and borrow and return items.

This stand-alone solution allows your library to be opened throughout the day, manned or unmanned as well as freeing up valuable staff time to spend with the students to promote reading and develop their literacy skills.

Let the kiosk do the leg work...

RFID self-service designed for schools!

**Interact direct with the screen**

A touch-screen interface provides access to our intuitive software, which minimises user training and keeps the product design simple.

**Login through multiple options**

Support for barcode membership cards, fingerprint biometric or on-screen keyboard comes right out of the box.

**Read items wherever they are placed**

Books placed anywhere on the shelf will be read by the system accurately and reliably, providing the best possible user experience.

**Protect the internals**

A secure, removable door provides access to the printer and hidden USB slots for basic maintenance and on-site support of the equipment.

**Immediate return date reminders**

The built-in printer can be used to provide the user with a complete simple statement of items that are currently on their account.

**Safe and secure design**

The unit has been designed to take the knocks and bumps of student life, whilst remaining safe - even when free-standing.

## RFID self-service designed for schools!
